SUMMARY

Motivated individual eager to apply academic knowledge to real-world challenges. Passionate about technology and committed to gaining hands-on experience and contributing to innovative projects. Ready to leverage strong problem-solving skills and teamwork in a dynamic environment.

TECHNICAL SKILLS

Ai Agent • RAG • Open Router • Ollama • Computer Vision (Mediapipe) • Azure Ai Foundry • Prompt Engineering • Java • JavaScript • TypeScript • Springboot • React

Experience

Thoughtworks

Step Program

07/2025 - Present

- Worked in a developer role with hands-on experience in real-world project development. Contributed to designing, developing, testing, and improving project features while collaborating with the team and following professional software development practices.

Projects

RAG

- Developed a Retrieval-Augmented Generation (RAG) application for intelligent document-based information retrieval and context-aware response generation. Implemented the end-to-end pipeline for processing documents, retrieving relevant context, and generating responses using a language model.

AI Resume Generator

- The app fetches your repositories, languages, and contribution stats via GitHub tools, passes them to an LLM (via OpenRouter), and produces a structured resume. You can review and edit the result in the browser before downloading as PDF.

AI Arena

- Developed an AI debate system featuring two autonomous agents that argue opposing viewpoints on a given topic, followed by an AI judge that evaluates their arguments and determines the winner. Implemented multi-agent interaction, structured debate rounds, and automated evaluation based on the quality and relevance of arguments.

Fancy Snap

<https://sagnikghosh001.github.io/fancy-snap/>

- A minimal browser-based web app that captures camera video and overlays a live filter effect inside a hand-based selection rectangle. It uses p5.js for canvas rendering and MediaPipe Hands for hand landmark detection.

Cluedo

- Developed a digital version of the classic Cluedo mystery game, implementing core gameplay mechanics, player interactions, game logic, and the clue-based deduction system. Designed the game flow to provide an interactive and engaging multiplayer experience.

Readit

- Developed a full-stack social media platform enabling users to create and share posts, interact through likes and comments, and engage with content. Designed an interactive landing page using shader-based visual effects to create an immersive and engaging user experience.
